

COOPER HEREFORD RANCH

59th
Annual Production Sale

Tuesday, March 11, 2025 12:30 pm MST

at the ranch, 1/2 mile south of Willow Creek, MT

Selling 90 Yearling Bulls
30 Yearling Heifers

Welcome

TO OUR 59TH ANNUAL PRODUCTION SALE

On behalf of my family and crew, I would like to thank you for showing interest in our program and humbly invite you to join us for our 59th annual sale this March at our ranch in Willow Creek.

The bulls featured in this catalog are the end product of a program that has focused primarily on maternal and performance for nearly 80 years. They are bred with the commercial cattleman in mind and should add longevity to your bull battery, fertility to your cowherd, and performance and predictability to your calf crop. They're functional bulls that have length, bone, muscle and eye appeal. They travel well and are backed by solid cows that possess a natural mothering instinct. This calf crop weaned off the cows extremely healthy and transitioned into the feedlot with ease. Most were born in a -40 degree snow storm that lasted over a week and were still able to maintain their condition and wean off a bit heavier than the 2023 crop. A testament to the hardiness of the Hereford breed and the bred-in performance that comes with the CL 1 Domino prefix.

As mentioned in last year's letter, we've trimmed our pasture turnout period back from 60 days to 45 days. It has strengthened fertility in our herd and further increased the uniformity of our calf crops, which you'll appreciate first-hand in this sale offering.

The markets remain hot and it's a terrific time to be in the cattle business. As both F1 females and baldy steers are bringing top dollar in sale barns across the nation, we continue to see interest in our program from cattlemen looking to add white faces to their herd. We're proud to have sourced functional, reliable cattle to progressive ranchers for over 60 years and hope you'll reach out to us personally if you have any questions or would like assistance selecting the right bull.

Sincerely, Mark & Cristy Cooper Family

We always believed this bull had the look and power to move a program to the next level. He's definitely making an impact in our herd. A really nice patterned bull with eye appeal, a wide base and deep body. His sire group is the largest to sell this year and it includes a number of ETs out of 964G, 978G and 9223G. He's a trait leader in 8 categories and ranks in the top 5% or better for WW, YW, MCE, CW and CHB\$. Dam 719E ranks in the top 10% for Udder, Teat, MARB and CHB\$. She's owned by the same partnership as 267K.

Owned with: Churchill Cattle Co., Hoffman Herefords, Stelplflug Cattle Co.

We really liked the make of this bull as a yearling and his progeny are stamped with the same style and substance with good pigment and rib shape. Not many holes in his EPD profile as he's a trait leader in 11 categories and backed by a pedigree full of bred-in longevity, big time performance, and predictable maternal and carcass. We think you're really going to like what this bull has to offer! Nine calves sell including four flush brothers out of the superior uddered 8171F cow that sold to Buford Ranches, LLC.

Another 0186H son that has really added some depth to our bull pen this year. Thirteen sons sell, including ETs out of 050H, 052H and 889F. This bull packs some big time carcass numbers backed by a lot of maternal. Sons had an IMF ratio 107/15. Both his sire and dam rank in the top 10% of the breed for MARB and CHB\$. Four flush brothers to 2191 sold in our 2023 production sale and all weighed over 750 lbs. at weaning.

Like 2191, we missed taking a picture of this bull as a yearling. But he's a stud! Only seven sons sell, four out of first calf heifers, and we pictured five of them. 2230K is a trait leader in 8 categories, excelling in performance, maternal and carcass. His sons performed really well (WWR 105; YWR 104) and scanned well too (REA ratio 101; IMF ratio 104). Donor 039H raised him as a first calf heifer and has been a solid producer ever since.

Over half the bulls selling this year have this bull in their pedigree. Used extensively in numerous programs, his progeny continue to be well received across the industry for their phenotype and ability to excel in economically important traits. Solid performance numbers coupled with calving ease and excellent MM and MG make these sons pretty hard to pass up. He's a trait leader in 12 categories including all maternal traits. Daughters look the part, with beautiful udders.

Sires dark red calves with lots of extra pigment. Last year his sons sold like hot cakes averaging just over \$17,000 on 18 head. Sons selling this year offer a nice blend of calving ease and performance. Dam 6162D is an 055X daughter that also has a tremendous udder and packs some performance into her offspring. She's the dam of herd sire 0186H as well. 1176 is a trait leader in 9 categories.

CL 1 Herd Sires

Since purchasing our foundation Line 1 stock from the US Range Livestock Experiment Station we have prioritized performance and structure/phenotype when selecting our herd sires. We have not incorporated genetics outside the Line 1 bloodline and rely solely on our breeding or that of Holden Herefords. We feel that line breeding has increased the predictability of inheritable traits and the overall uniformity of our herd and its offspring. We strive to produce well balanced, functional bulls that have eye appeal and style.

CL 1 Females

We've always prioritized fertility, udder quality and milk production when making decisions on the cows we keep and the herd sires we retain or purchase. We also expect our cows, first calf heifers included, to raise a vigorous calf that performs and ratios above 90 within our herd. Recips are homegrown and ET calves are raised on the ranch from birth to sale day. This ensures all calves are managed similarly and also helps prevent introduction of health concerns into our herd from outside genetics.

the *CL1* advantage

EXTRA shot of Heterosis

Our inbred coefficient of 24-36% ensures MAXIMUM heterosis when crossing on Herefords or other breeds.

Closed Line Precision

More than half a century spent maintaining a closed line of genetics that has always prioritized performance and maternal means, unmatched consistency and quality.

Unrivaled Data & Testing

Have utilized technological advancements and real world data for over five decades. Among the first Hereford breeders to run GE-EPDs on our entire herd & each subsequent calf crop.

Ready to Work

Whether you're retaining heifers or selling calves, our cattle are bred to thrive and deliver exceptional results!

Elite Breeder Status

Acknowledged by the American Hereford Association as one of the 1% of Hereford breeders that qualify for Platinum TPR Status!

AHA Platinum TPR Breeder

The Platinum TPR Breeder is the highest level of achievement when it comes to complete calf crop reporting. Breeders must meet all the requirements of Gold TPR Breeder status (listed below) plus genotype 85% of their calves with a weaning weight submitted.

- Complete reporting of calving ease and reproductive status for each dam on inventory.
- Complete reporting of birth, weaning, and yearling weights for each live calf recorded in the calf crop.
- Complete reporting of scrotal measurements for each bull calf with a recorded yearling weight.
- Ultrasound data reported on 25% or more of the calf crop.

We go above TPR Platinum standards

In addition to the above information, we also:

- Record Teat and Udder scores on all cows at time of calving and submit to AHA with our calf crop.
- Submit ultrasound data to AHA on ALL animals with a recorded yearling weight (heifers included).
- Run GE-EPDs on all sale animals and our ENTIRE cow herd.

GE-EPD Accuracy Improvement

WHOLE HERD TESTING

All sale animals have been tested and are free of known genetic defects.

All bulls and heifers have been ear notched and are negative to PI and BVD. Montana is once again Class Free with regard to brucellosis - all sale animals have been bled and tested negative.

In response to feedback from the veterinary community and buyers of MT cattle, the Dept. of Livestock has developed a state program to reduce the spread of Johne's disease through animal sales and movement. Our ranch is actively participating.

BREEDING SOUNDNESS

FERTILITY

JANUARY 22, 2025

All yearling bulls featured in this catalog have passed a Breeding Soundness Exam (BSE) completed by Dr. Will Oliver, DVM.

Scrotal and pelvic measurements were obtained by Dr. Oliver as well.

SC (Scrotal Circumference)

A measurement of fertility. Testicle size indicated by scrotal circumference measured in (cm) is a highly inheritable trait very much correlated to reproductive efficiency. A valuable indicator of bull fertility and puberty, and highly related to early puberty in heifers and cow fertility, increased bull scrotal circumference should improve fertility and inherent cow herd productivity.

Acceptable range (cm) for bulls 12-14 mo. is 30-35 cm

90% of this year's offering rank above breed average for Scrotal EPD.

Pairs are turned out to pasture in mid May and graze primarily irrigated grass/legume pastures until they are weaned in late August. Groups are supplemented with loose mineral and salt.

No creep is ever used.

Calves were weaned just before Labor Day, placed in a drylot and fed twice daily a mixture of chopped hay, alfalfa silage, whole corn, and a mineral based protein supplement. Most of the bulls exceeded our target gain of 3.5 lbs./day, which we feel is adequate in ensuring they have enough flesh to maintain condition as a yearling without sacrificing structural integrity.

All bulls are parent verified, have ultrasound data and GE-EPDs.

Stout made 2191K son chock full of muscle and power. Short marked bull with a red neck. He carries loads of rib shape and as much thickness in his hind quarter as any bull in the sale. Certainly has the "herd bull" look! Excellent phenotype and a super set of EPDs. Dam is an outstanding 776E daughter that entered our ET program last spring. She ranks in the top 20% of the breed in 12 traits!

Top-end gains from birth to yearling. Posted an 815 lb. actual WW and 1305 lb. actual YW. He's the mirror image of his sire and just as likely to move your program to the next level. Nice patterned bull with eye appeal, 100% pigment, a wide base and a deep body. Moderate in frame with extra power, thickness and overall dimensions. Dam 9223G (opposite pg.) brings the calving ease that makes this pedigree very complete. She traces back to the 3113N bull we purchased from Holden Herefords that did our program a lot of good. She is now owned by Buford Ranches, LLC.

Nice bull with very balanced numbers. Short marked with a strong top, a good hip and ideal muscle expression. Bred-in fertility and longevity coupled with adequate growth and top 10% for SCF, MM, MG and BMI\$. Phenotypically, Dam 9160G, pictured below, was one of our favorite cows. A role model female with a near perfect udder. Full sister sells as Lot 4145. Maternal brother sells as lot 473M.

- Top 15% SC, SCF, MM, MG, Teat, MARB, BMI\$
- Good individual scan data with a 119 IMF ratio

A stout made 2126K son that's marked up really well. Combines phenotype with numbers, ranking in the top 25% of the breed in 13 traits. He's correct made with a big top and carries a lot of extra muscle expression. Dam is a very balanced 7131E daughter with a WWR 100/4. Calf weighed 800 lbs. at weaning. 483M provides a nice blend of performance and maternal.

This bull is a stud! We've liked him ever since he hit the ground last winter. A complete package with excellent phenotype and good numbers. Super clean, very stylish bull with a thick top, clean sheath and good neck extension. He's sure footed and really moves out freely. Dam 976G is a donor. She's moderate, has a very nice udder, and ranks in the top 15% or better for CE, Fertility, MCE, Udder, Teat, REA. Three of her sons (3152, 3160, 3248) averaged \$17,000 in our sale last year, selling to Coates Ranch Co., Dunnire Ranch Co, and Granzow Herefords and Gus Gustafson.

- Top 15% for WW, YW, SC, MM, MG, MCE, Udder, Teat, CW, CHB\$

If you've been shopping for an 055X son, don't miss this bull. Lots of stretch along with eye appeal, a strong top and a deep quarter. He's complete in every aspect. Good pigment with a red neck that extends down to the ground. These three sons out of 055X (opposite pg) are really a set! Same multi-generational cow power coupled with the carcass merit that you'll find in 4164M and 4170M. But if you were sorting them off EPDs this bull rises to the top. He ranks in the top 15% of the breed in 14 traits. Maternal brothers sell as lots 4164M and 4170M.

- Top REA EPD in the sale

Talk about some performance. This 121J son gained exceptionally well from birth to yearling. If that's not impressive enough, dam is a first calf heifer. Ranks top 20% CE, 25% BW, 15% WW and 10% YW. He's a long, smooth made bull with depth of rib and a clean sheath. 100% eye pigment, a red neck and is red to the ground. Dam is a very nice 0186H daughter with a tremendous EPD profile.

4193M is an absolute stud! Which isn't surprising as his pedigree stacks generations of performance, maternal and carcass merit. Stylish, short marked and correct made, this 267K son has 100% pigment with good rib shape and lots of muscle and power from front to back. Donor 964G is a top-end 7131E daughter with a WWR 107/4 and a YWR 106/4. She ranks in the top 5% for WW, YW, MM, MG. She sold to Buford Ranches this past fall. Maternal brothers to this bull sold in our 2024 sale to B&D Herefords, KS and Tudhal Hereford & Angus, MT.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes.

AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

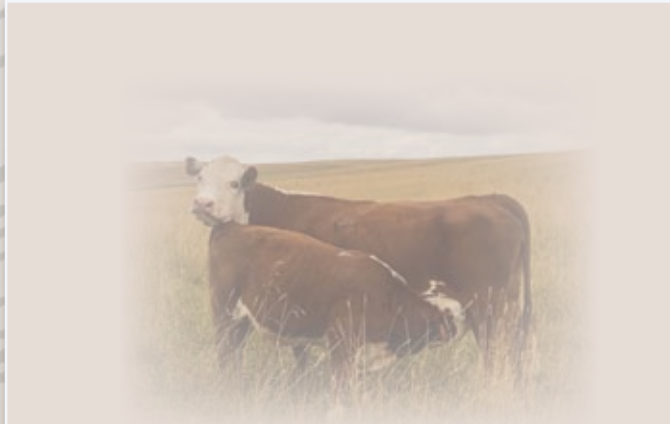

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

CHBS is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef® after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

COOPER HEREFORD RANCH

CLI cows It takes generations of conscientious breeding and a commitment to maintaining strict culling standards to build a foundation herd. We've been in the seedstock business for over 75 years and have stayed true to what matters most to the commercial segment: disposition, fertility, udder quality and performance.

Find more information about this value added program at

www.hereford.org/commercial/

70% of the heifers selling this year are BMI\$ qualifiers. **\$371**

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year.

View the online CATALOG and VIDEO CLIP of each BULL selling at www.northernlivestockvideo.com
Register online at:

- First time users must register as a viewer.
- In the Live Auctions Tab, select "Cooper Hereford Ranch" and register as a buyer (only if you wish to buy) and click the blue submit button.
- Complete required contact and banking information then click the proceed button.
- After you have been approved as a buyer, you will receive a confirmation email. On sale day, click the green view button for the sale. You will have a "bid now" button on your screen to place your bids. Click the "bid now" button to place your bids.
- The bid received by the auctioneer will be the amount showing in the Price box in the bid.

Phone Bank

To register with NLVA call:

866-616- 5035 BEFORE Sale Day.

Those wishing to use Northern Livestock phone bank to bid must pre-register and have a bid number.

Bidders who are successful in making purchases will be contacted following the sale to make payment and delivery arrangements.

Northern Livestock's Sale Day Bid Line: 1(406) 245-0889

COOPER HEREFORD RANCH

Scott Sayers

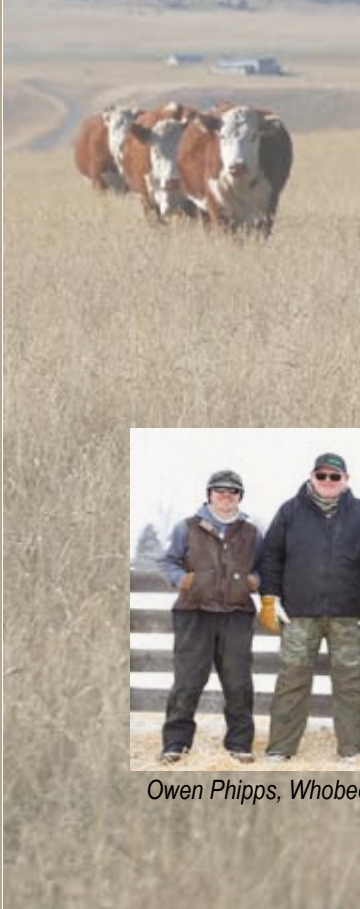

Leroy Ballard

Luke McDonagh

Our Crew

One of the greatest challenges our Industry faces today is the shortage of skilled workers who are willing to devote their time and energy to an operation. We are so blessed to have a small, but mighty crew. We appreciate their commitment to our operation and willingness to work extra hours when the seasons demand.

Owen Phipps, Whobee Hughes, Carson Clark, Dave Hanson

Thank You

In addition to those who contribute their professional services to our operation throughout the year, there is also a large group of individuals working ringside and on the auction block who help ensure our sale runs smoothly. THANK YOU - your expertise, professionalism & dedication do not go unnoticed.
